

Support available for Unity®

Unity® is a symbol based system used to represent language in AAC devices. It uses a small set of pictures combined in short sequences to produce words, phrases, and sentences.

Support in programming and troubleshooting is available for Unity® devices. Your primary speech pathologist will be able to support you but if you are looking for more support you could try the following:

Liberator

Liberator is a supplier of products, training, and support for communication and independence. They provide communication aids, early learning software, adapted toys, switches, computer access devices, and classroom resources.

Training and support: Liberator Australia employs a team of professionals to provide customers with training and support for communication, inclusion and independence. Support may include training, support with device programming and troubleshooting, support during trial of Liberator/PRC devices, AAC implementation strategies, goal-setting for language learning, and more. They provide online training to regional customers via Skype or Go To Meeting, and can direct clients to suitable webinars.

Hire: Liberator offers free device trials, and technical support is readily available by phone and email.
